7   there is not enough information about your environment or configuration to offer any assistance. This error is suggesting that either webpack or babel are not working correctly, as `export` is only available in ES6, and those modules are what provide ES6 support. – Claies Jul 10, 2016 at 21:44

61 You should use `module.exports = MyClass`, not `export class MyClass` – onmyway133 Aug 4, 2017 at 9:47

4   If you're running this in Node > 12, rename the file to myFile.mjs. That `mjs` extension should tell Node you're using ES6 Module syntax. – Yair Kukielka Oct 27, 2021 at 7:23
